

Plant list: General

The following list contains a variety of plants

Plants are incredibly diverse and essential for life on Earth. They combine beauty, functionality, and ecological significance and they deserve our care and appreciation.

Botanica processes the corresponding plants into extracts which are available in different carrier substances (water-soluble, oil-soluble etc.) – see extract finder. These extracts can be used for cosmetic and technical purposes.

Botanica neither performs nor commissions tests on animals. Our raw materials are natural and can vary slightly from harvest to harvest without affecting the quality of the product. Further information can be found in the corresponding specification.

Please note that certain plants are not available all year round. Please ask us about the availability.

This list is not exhaustive and only represents some of the plants we process. If you are looking for other specific extracts to use in your formulation, we look forward to hearing from you.

According to the EU Cosmetics Regulation, the number of cosmetic allergens that must be declared increased from 26 to over 80 (see EU 2023/1545 and relevant 2026 and 2028 deadlines). Many of these substances occur naturally, especially in essential oils but also in plant extracts. Botanica produces mainly customized extracts, hence there is an extensive number of extracts and of plants. The thorough and reliable compilation of allergen data is associated with considerable effort, thus Botanica focuses on top products. The raw materials in the following table had a very low turnover in the recent years, thus allergen data is currently not available. For larger order quantities, we can provide allergen data with a lead time of three months, please feel free to contact us for further information.
