Ecobiol® Fizz

**EVONIK**  
Leading Beyond Chemistry

## CHALLENGE

Gut health and its related challenges have become one of the most important parameters for profitable and sustainable poultry production. In the transition towards antibiotic-free production, maintaining a balanced intestinal microbiota is a demanding and complex task.

When birds are exposed to stressors, such as feed changes, pathogens or vaccinations, diseases can occur easily and overall animal well-being is put at risk. Often, medication can have a negative effect on the microbial balance and gastrointestinal tract, creating a requirement to rebalance the microbiome by supplementing beneficial bacteria through probiotics.

Tackling these specific periods and ensuring a stable balance of the intestinal microbiota requires a reliable, rapid, and convenient solution that counters the effects of stressors to prevent economic losses.

## SOLUTION

Ecobiol® Fizz is an effervescent tablet for water line systems and consists of our natural, fast-growing *Bacillus amyloliquefaciens*.

The soluble tablet delivers *Bacillus amyloliquefaciens* fast and easy to counteract gut imbalances. Continuously applied it supports the overall animal well-being by positively influencing the gut microbiome and supporting digestion.

**Ecobiol® Fizz easy-to-use is a highly efficient water soluble-probiotic for poultry farming, providing better efficacy to the flock consistently and limiting biofilm formation.**

## WHAT'S IN IT FOR YOU

- Fast, easy, and convenient delivery of product to counteract quickly (on the effects of stressors)
- Maintains well-being and overall health status of broilers in challenges faced throughout the production cycle
- Finally, improves livestock performance and increases ROI

**Visit our website or talk to your gut health expert at Evonik to find out what more Ecobiol® Fizz can do for you.**

## BENEFITS

**Ecobiol® Fizz is applied directly in water lines on farms.**

- Supports establishment of a beneficial intestinal microbiota, aiding digestion when feed intake is low
- Delivers fast supply of *Bacillus amyloliquefaciens* spores
- Flexible usage of probiotics, regardless of current feed formulation
- Easy application and handling of highly concentrated product (without stirring)
- No sugar-based carrier that supports the formation of biofilm in the water tanks and drinking lines
- Homogenous distribution of spores in the stock solution (without stirring)
- Compatible with other ingredients and various water conditions
