

K-2025 Poster for Smart Effects – Silanes

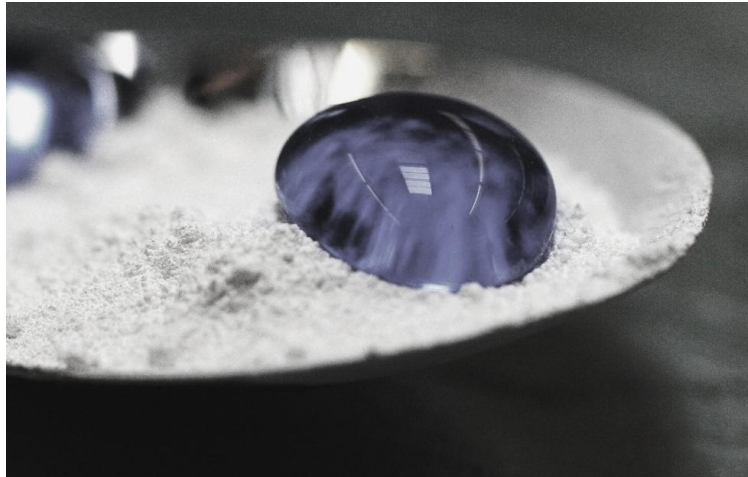

Dynasylan® SILFIN 301

Reliable solution for silane x-linking HFFR compounds

- Ready-to-use cocktail for the Sioplas process
- Lower risk for scorch & less sensitive versus humidity in base compound
- Suitable as well for polymer-mix with high VA content (>20%)

Dynasylan® HYDROSIL

Oligomeric & highly active silane hydrolysates in water

- Storage stable, safe and sustainable
- Easily dilutable and adjustable in water
- Improved particle coating due to oligomeric structure

Dynasylan® Oligomers

Outstanding performance over regular monomers

- Higher effectivity and enhanced processing
- Reduced volatile by-products
- Higher boiling and flash point

K-2025 Poster for Smart Effects – Silanes

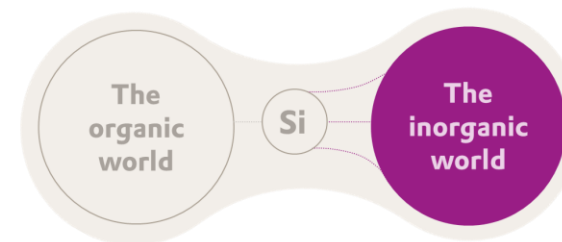

Dynasylan® SILFIN

Ready to use vinyl silane mixtures for the silane cross-linking process

- Constant and reliable quality of the physical blends
- Optimized systems for effective and reliable grafting and cross-linking
- Globally available
